Community-Sourced Guidance

A Community-Sourced deliverable uses online platforms to collect information, allowing for the continuous renewal of content.

It offers a publicly accessible, online collaborative mechanism to capture current practice, state-of-the-art knowledge and stakeholder understanding on an emerging/existing area or technology.

It is suitable for global collaboration and does not require full consensus associated with the development of a National Standard.

It ensures that basic principles of standards development (transparency, collaboration, and fairness) are applied.

To learn more about Community-Sourced Guidance, please go to the homepage under Clean Technology Innovation Initiative and ‘click’: “Flexible Standards-Based Strategies and Solutions - SCC”.
